EXAMINER'S AMENDMENT AND REASONS FOR ALLOWANCE

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Chad Herring on 12 February 2008.

Claims 1, 28 and 69 are amended as follows:

1. (Currently amended) A medical device, comprising:

an imaging element for subcutaneous placement in a tissue mass via a delivery apparatus adapted to penetrate the tissue mass, the imaging element adapted to identify an area of interest in the tissue mass; and

a guide element ~~connected to the imaging element and having a separable portion having,~~ when the guide element is intact: (i) a first end coupled to the imaging element, (ii) a second end distal from the imaging element, and (iii) a separable portion that includes at least the second end;

wherein the first end of the guide element is adapted to be coupled to the imaging element, and the second end is adapted to extend exteriorly to the tissue mass, after the delivery apparatus has been removed from the tissue mass;

~~wherein the guide element is connected with the imaging element, such that after the imaging element has been deployed within the tissue mass[,] and a delivery apparatus used to deploy the imaging element has been removed from the tissue mass, (i) the imaging element is connected to the guide element and at least part of the guide element extends exteriorly of the tissue mass to permit the locating of the area of interest, and (ii) the separable portion is adapted to be removed from the tissue mass, such that no part of the guide element extends exteriorly of the tissue mass~~

wherein the separable portion is removable from the tissue mass after the delivery apparatus has been removed from the tissue mass, and wherein the guide element

is adapted to not extend exteriorly to the tissue mass after the separable portion has been removed from the tissue mass.

28. The medical device according to claim ~~23~~ 26, wherein the filament comprises a length of suture material.

69. (Currently amended) A delivery apparatus for the percutaneous placement of a medical device at an area of interest in a tissue mass to facilitate subsequent determination of the area of interest, comprising:

an introducer defining a lumen having a proximal end and a distal end defining an expulsion opening;

a piston having a distal end slidably received within the lumen, wherein when the delivery apparatus is in a ready position, the distal end of the piston is spaced inwardly from the expulsion opening to form a recess between the distal end of the piston and the expulsion opening; and

a medical device comprising:

an imaging element positioned in the recess for subcutaneous placement in a tissue mass to identify an area of interest in the tissue mass; and

a guide element ~~connected to the imaging element and having a separable portion having, when the guide element is intact: (i) a first end coupled to the imaging element, (ii) a second end distal from the imaging element, and (iii) a separable portion that includes at least the second end;~~

wherein the first end of the guide element is adapted to be coupled to the imaging element, and the second end is adapted to extend exteriorly to the tissue mass, after the delivery apparatus has been removed from the tissue mass; and

wherein when the piston is advanced into the recess, at least the imaging element is expelled through the expulsion opening into the tissue mass, and wherein the separable portion is removable from the tissue mass after the delivery apparatus has been removed from the tissue mass, and wherein the guide element is adapted to not extend exteriorly to the tissue mass after the separable portion has been

~~removed from the tissue mass the imaging element and the guide element are connected, such that after the expulsion opening is withdrawn from the tissue mass, (i) the imaging element while still connected to the guide element is placed within the tissue mass at the area of interest, and at least part of the guide element extends exteriorly of the tissue mass, and (ii) the separable portion is adapted to be separated from the guide element, such that no part of the guide element extends exteriorly of the tissue mass.~~

Claims 2-27, 29, 30, 32-42, 44-68 and 70-71 remain as submitted by Applicant on 2 January 2008. Additionally, as the generic claims identified in the Requirement for Election on 7 Dec 2006 are now in condition for allowance, all depending claims previously withdrawn as being directed to non-elected species of the present invention are hereby rejoined.

2. The following is an examiner's statement of reasons for allowance: The closest prior art of record, Foerster (US PG Pubs. No. 2005/0165305), does not fairly teach or suggest a guide element having a separable portion, wherein the separable portion is expressly adapted to extend beyond the tissue mass when detached from the remaining portion of the guide element, and wherein the separable portion is also expressly adapted to be removed from the tissue mass such that no portion of it extends beyond the tissue mass after removal.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to PARIKHA S. MEHTA whose telephone number is (571)272-3248. The examiner can normally be reached on M-F, 8 - 4:30pm.
